

ABSTRACT

A confectionary device for relaying dynamic messages, the device having a first edible member having a substantially rigid nature, and the first member being in the form of a tablet. A plurality of edible indicia being received on the first member and retained thereon in a secure manner such that the indicia is viewable by an intended recipient and consumable thereby. An attaching means for attaching the indicia to the first member, whereby a desired arrangement of indicia are easily applicable onto the first member to relay a desired message to an intended recipient.
